Disclaimer: The purpose of this briefing is to provide a ***Regional*** weather threat assessment and is meant as a general overview. County/Parish decision makers should consult their local NWS forecast offices for the latest detailed, local weather information. To find your local NWS forecast office, go to <http://www.srh.noaa.gov> and click on the "Weather Forecast Offices" tab and click on the map for your area.

FEMA Region 6 Weather Threat Briefing

Thursday, June 15, 2017

Issued: 0800 CT

National Weather Service

Southern Region Headquarters
Regional Operations Center
Fort Worth, TX

Day 1 Hazards: Enhanced risk for severe storms over far northern OK.
Hail/damaging winds/main threats.

Day 1 Hazards: Slight risk for severe storms from the eastern TX
Panhandle into northern OK as well as E AR. Hail/damaging winds main
threats.

Prepared by: Mark Wiley
817-978-1100 x 147

Key Points

Today

- Enhanced risk of severe storms over far N OK with a slight risk across the remainder of N OK into the E TX Panhandle. Slight risk for severe storms also over eastern AR. Damaging winds/hail the main threats

Friday-Saturday

- Marginal risk of severe storms over E OK into AR on Friday
- Marginal risk of severe storms over far N OK on Saturday

Sunday-Monday

- No Significant Weather Impacts Expected

River Flooding

- Water levels slowly receding along the MS River and over southeast LA as well as E AR

Tropical Weather Outlook

- Low pressure is expected to form over the NW Caribbean Sea and the Yucatan Peninsula by the weekend. Conditions appear to be favorable for some development while it moves slowly NW towards the S Gulf of Mexico by early next week.
Formation chance through 48 hours is 0%. Formation chance through 5 days is 50%
- An area of disturbed weather associated with a tropical wave is located S/SW of the Cabo Verde Islands. Gradual development of this system is possible during the next few days while the wave moves westward at 15 to 20 mph over the low-latitude tropical Atlantic.
Formation chance through 5 days is 20%

*FEMA Region 6 Threat Matrix

Jun 14, 2017 - Jun 18, 2017

	THU	FRI	SAT	SUN	MON
Severe Weather	Far N OK	E OK, AR	Far N OK		
	E TX Panhandle N OK, E AR				
Heavy Rain / Flash Flooding	N OK				
Fire Weather					
River Flooding	SE LA, E AR	SE LA, E AR	SE LA, E AR	SE LA	
Tropical Weather					

	No Weather Threats Expected
	Very Common – Happens Often
	Common – Happens Frequently
	Uncommon – A Few Times a Year
	Rare – Once Every 1-5 Years
	Very Rare – Once Every 5-10 Years

For more details on the colors in the threat matrix refer to the last slide in this briefing.

5-Day Precipitation Forecast & River Flood Status

- The Mississippi River and areas in southeast LA continues to slowly recede
- Minor flooding observed in eastern AR will continue to slowly recede

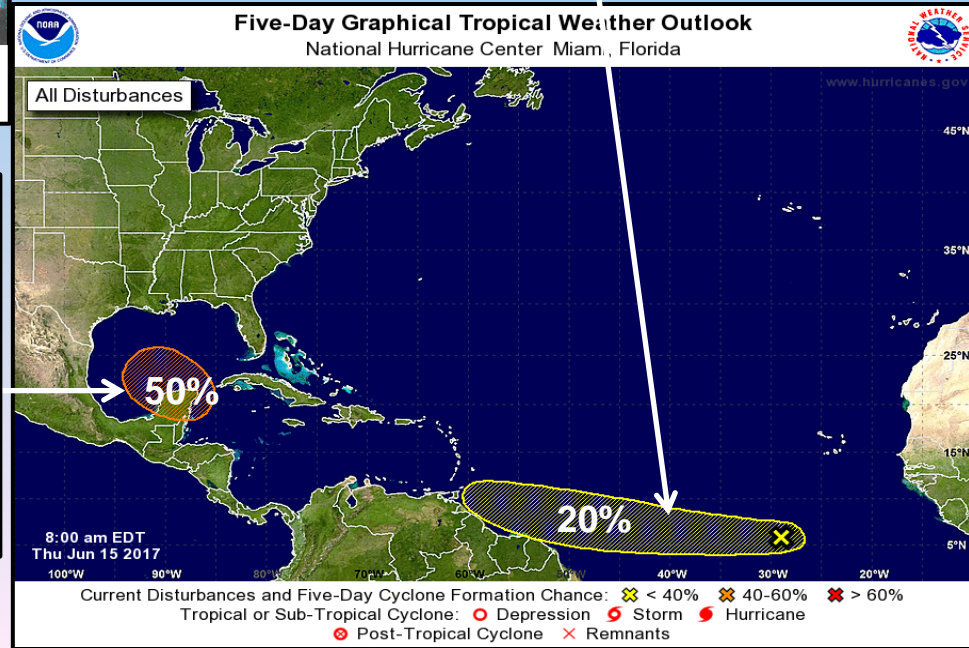

For the latest on river flooding: <http://water.weather.gov/ahps>

Tropical Weather Outlook

An area of disturbed weather associated with a tropical wave is located well south-southwest of the Cabo Verde Islands. Some gradual development of this system is possible during the next few days while the wave moves westward at 15 to 20 mph over the low-latitude tropical Atlantic.

Formation chance through 5 days is 20%

A complex area of low pressure is expected to form over the NW Caribbean Sea and the adjacent Yucatan Peninsula by the weekend. Conditions appear to be favorable for some development of this system while it moves slowly NW towards the southern Gulf of Mexico by early next week.

Formation chance through 48 hours is 0%

Formation chance through 5 days is 50%

The criteria for the color codes in our briefings is below, please provide any feedback to sr-srh.roc@noaa.gov.

Weather "Threat" Matrix			
Color	Definition	Criteria	Example(s)
Green	Very Common Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Little Inconvenience to Daily Routines	Severe: Marginal Risk from SPC Flooding: Minor flooding expected over localized areas Tropical: None Fire Weather: No Watches/Warnings, fuel moisture above 10% or green up active	<ul style="list-style-type: none"> Thunderstorms expected over LA this afternoon; a few may produce winds to knock down a few trees Something that happens almost every day in a particular season such as <u>seabreeze</u> storms in coastal TX
Yellow	Somewhat Common – Happens Frequently Safety: Rarely a Direct Threat to Life and Property Impact Potential: Typically Results in Some Inconvenience to Daily Life	Severe: Slight Risk from SPC Flooding: Nuisance flooded expected for a widespread area, or Minor flooding expected over isolated areas Tropical: A weak tropical wave expected to move towards or near any coastline Fire Weather: Red Flag Watches/Warnings and/or SPC outlines enhanced or critical fire outlook	<ul style="list-style-type: none"> 2-3 inches of rainfall expected over central AR today and tonight; some minor (brief) street flooding possible Scattered severe storms possible, one or two tornadoes expected, along with reports of strong winds/wind damage and ~1" hail
Orange	Uncommon – A Few Times a Year Safety: Often Threatening to Life and Property, Some Damage Unavoidable Impact Potential: Typically Results in Minor Disruption to Daily Life	Severe: Enhanced Risk from SPC Flooding: Minor flooding expected over a widespread area (including urban locations), or Moderate flooding expected over isolated areas Tropical: A Tropical Storm expected to move towards or near any coastline Fire: Critical fire outlook for more than 2 consecutive days, Warnings for 2 or more consecutive days, D3-D4 drought conditions	<ul style="list-style-type: none"> A snow/sleet mix is expected to move through or near the DFW area tomorrow morning; travel impacts likely Numerous severe storms possible, a few tornadoes possible along with several reports of wind damage along with damaging hail Some large fires reported, burn bans advertised, critical conditions expected
Red	Rare – Once every 1-5 Years Safety: Extensive Property Damage Likely, Life Saving Actions Also will be Needed Impact Potential: Will likely result in Large Disruption to Daily Life	Severe: Moderate Risk from SPC Flooding: Moderate flooding expected over a widespread area (including urban locations) Tropical: A Hurricane expected to move towards or near any coastline Fire: Large areas of critical conditions for 2 or more days, Warnings for 3 or more days, Severe to extreme drought	<ul style="list-style-type: none"> A Category 1 hurricane will be moving towards the NW Gulf in the next few days Widespread severe storms likely, strong tornadoes, widespread wind damage, and destructive hail Large fires ongoing throughout the area with critical fire weather conditions expected to continue
Purple	Very Rare – Once Every 5-10 Years Safety: Property Damage Unavoidable, Immediate Action to Save Life will be Needed Impact Potential: Typically Results in Long-Lived Widespread Major Disruption to Daily Life	Severe: High Risk from SPC Flooding: Major flooding expected over a widespread area (including urban locations) Tropical: A Major Hurricane (Cat3 or greater) expected to move towards or near any coastline Fire: Large area of critical conditions for 2 or more days, Warnings for 3 or more days, Long term (months) of severe to extreme drought	<ul style="list-style-type: none"> A Category 4 hurricane is headed towards the SE LA; major storm surge, flooding and damaging winds anticipated to begin tomorrow Widespread severe storms expected, tornado outbreak probable with long-lived, very widespread and particularly intense storms
